

NTCIR-19:

Medical Natural Language Processing for emergency Call (MedNLP-CALL)

Sa'idah Zahrotul Jannah, Eiji Aramaki, Ph.D, Shoko Wakamiya, Ph.D (NAIST, Japan)

Lisa Raithel, Ph.D. (TU Berlin and DFKI, Germany), Roland Roller, Ph.D. (DFKI, Germany)

Pierre Zweigenbaum, Ph.D. (Université Paris-Saclay, CNRS, LISN, France)

Dataset sample

- MD: Emergency services, how can I help you?
- Caller: Uh, hi, I... I'm calling about **my friend**. She, um, she got an **electric shock** just now.
- MD: I'm sorry to hear that. I'll help you. Can you tell me your friend's age and any medical history she might have?
- Caller: She's, uh, over sixty. I don't know everything, but she, um, she has high blood pressure and, uh, diabetes, I think.
- MD: Thank you. Is she conscious and breathing right now?
- Caller: Yes, she's, um, awake, but she's really shaky and, um, looks scared.
- MD: Is she experiencing any pain or other symptoms, like burns or difficulty breathing?
- Caller: She said her chest hurts a bit and, um, her hand is red where she touched the plug, I think.
- MD: Okay. Can you describe what happened? How did she get the shock?
- Caller: Um, she was, uh, trying to plug in something and there was a, um, spark, and then she kind of, uh, jerked back.
- MD: Where are you located? Is she still near the source of the shock?
- Caller: We're at her house, um, in the living room. I, uh, turned off the power, so it's, uh, safe now.
- MD: Good thinking. What time did this happen?
- Caller: Uh, just a few minutes ago. Maybe, um, five or ten minutes?
- MD: Thank you for the information. I'm going to dispatch a medicalized transport team to your location immediately. They'll be there shortly.
- Caller: Okay, um, should I do anything while we, uh, wait?
