1. Management

2. Usage

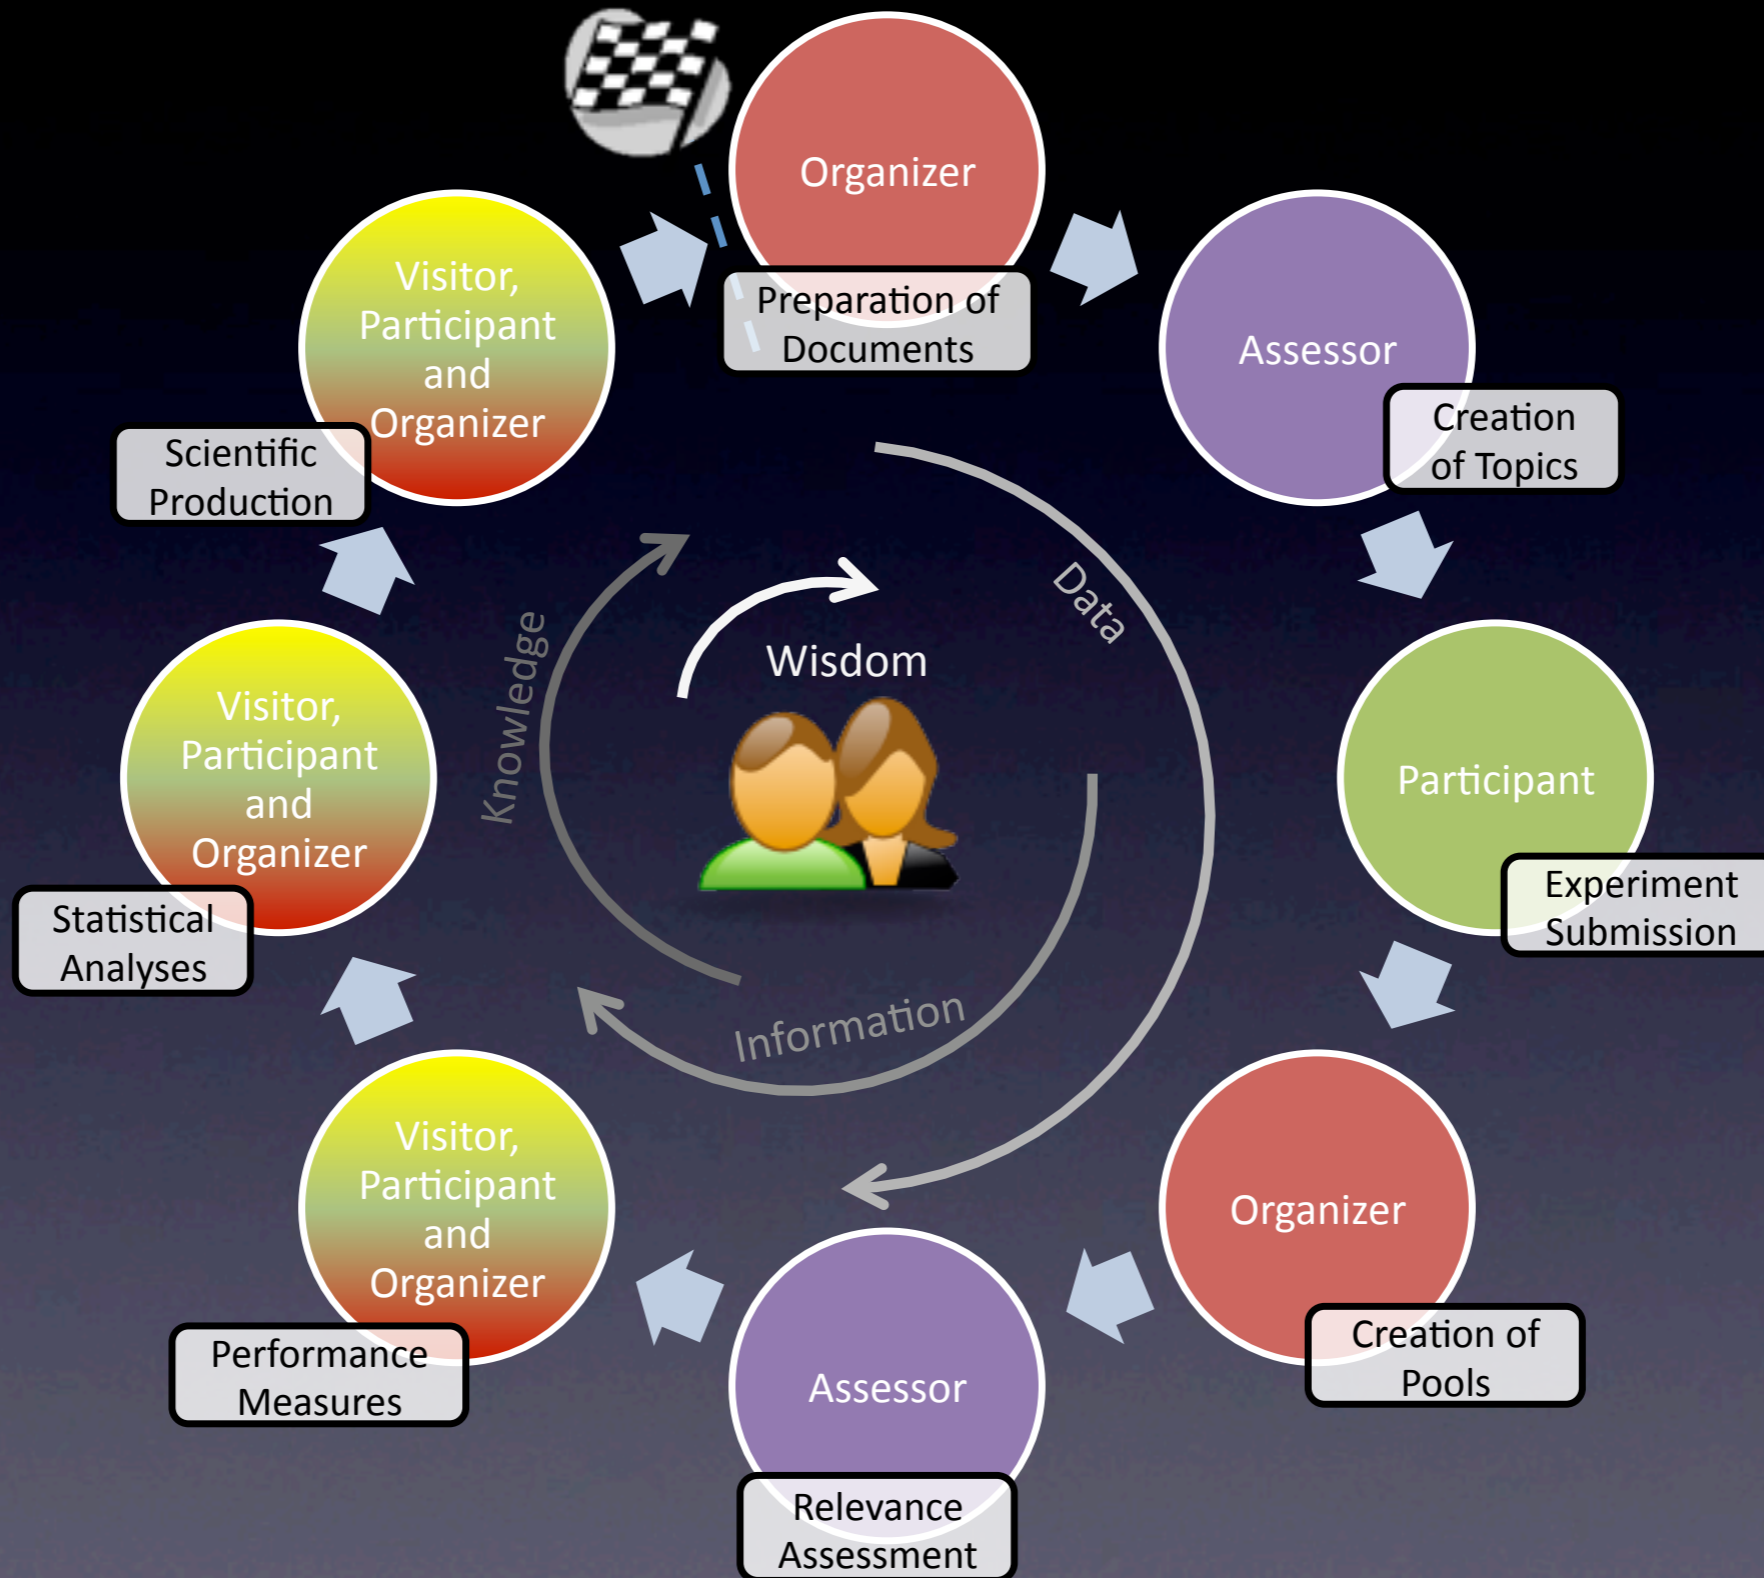

Digital Libraries for Scientific Data

The **scientific data** produced during an evaluation campaign should be **archived, enriched, curated, preserved**, and properly **cited** in order to ensure their future **accessibility** and **re-use**

- A **Digital Library** represents the natural choice for managing, making accessible, citing, curating, enriching, and preserving all the information resources produced during an evaluation campaign
- The current evaluation methodology has been mainly focused on ensuring **experiment reliability** and **comparability** rather than **modelling, organizing** and **managing** the scientific data produced during an evaluation campaign

- **Introduces a conceptual model**
 - it makes clear what are the entities entailed by the information space of an evaluation campaign, their features, and their relationships
- **Develops common metadata formats**
 - which provide meaning to the data, enable their sharing, re-use, and keep track of their lineage
- **Adopts a unique identification mechanism**
 - it allows for explicit citation and easy access to the scientific data and it supports the enrichment of the scientific data
- **Manages all the aspects of an evaluation campaign**
 - track set-up, management of document collections, creation of topics, experiments submission, relevance assessments, common tools for statistical analyses and reporting, common XML format for data exchange
